

# School Bus with Children - Movement Tracking Solution

Student Tracker is a vehicle tracking system designed for School Bus Tracking which helps parents and School Management. This system consists of GPS device with Display, External RFID reader.

When the child shows the RFID card to the device while boarding/alighting the bus, it sends the RFID data along with the location information to the Web Server.

User friendly Web Application helps the School Bus administrators to Add or modify the Students, Bus, Trip information easily any time, while data is stored in a secured server.
